Oak Quartersawn herringbone pattern 70 x 350 mm

STYLE

Style-conscious living means an individual choice to create your own style in your living environment. Flooring forms an important aspect of this, and literally forms the basis for the styling of a room. The colour, the pattern, and the chosen finish play a great role in determining the atmosphere of a house.

A Q2 parquet floor will help you adapt the space to suit your personal wishes. Q2 offers inspiration in this regard with wide-ranging possibilities in terms of wood type, colour, and pattern.

Q2 offers a unique online tool in the way of the Parquetnavigator (Parquet Navigator) with which you can choose the type of wood, colour, and installation pattern to design your own floor. It is even possible to create a digital version of the floor as it would appear in your own interior on the basis of a photograph. Take a look at www.parketnavigator.nl for further information. The Q2 dealer can assist you in making the best choice of flooring for the interior of your dreams.

Q2 AND UNDERFLOOR HEATING:

- Increased comfort in the home thanks to cosy warmth
- Good heat transfer
- Energy savings thanks to reduced heating costs
- Easy to install thanks to compact structure

Afromosia strip flooring 90 mm width

Oak Sherazade Antigue grey Herringbone 90 x 450 mm

COMFORT

Comfort is increasingly becoming the standard for the home experience. The Q2 parquet always has a pleasant feel, whatever the temperature. In cold conditions, underfloor heating ensures a cosy interior climate as the warmth comes from below. A room equipped with underfloor heating combined with parquet provides an ultimate sense of cosiness and comfort.

Q2 dual-layer parquet has been specially designed to optimize this home experience. Thanks to its unique composition and low height, when fully glued to the base floor Q2 provides excellent warmth transfer.

Underfloor heating distributes the warmth over a large surface area and leads to reduced dust rising than in the case of central heating. Consequently, parquet combined with underfloor heating results in a pleasant interior climate.

Due to its compact thickness, a Q2 parquet floor is suitable for use over underfloor heating installed later. This gives architects a certain amount of aesthetic freedom.

GREAT VARIATION!

Q2 is ideal for installing floors in all sorts of patterns, such as a block pattern, a plaited pattern, or a 'Hungarian Point' chevron pattern in one or more wood types. Another recommendation is one of the fifteen options from the Sherazade line, based on the adventurous raw character of driftwood. By finishing the floor with a special oil or wax, the effect can be adapted. You could emphasize the structure of the wood more, or simply opt for a specific colour with coloured oil. Differences in wood types, patterns, and finishes gives every floor its own character.

Oak Rustic 1-bis herringbone 90 x 450 mm

Oak grigio herringbone Slate 140 x 700 mm

DISTINCTIVE!

The unique dual-layer Q2 parquet distinguishes itself by its perfect stability, precise dimensionally stability, and a clever thickness ratio between the wear layer and the back layer.

Q2 is supplied as 'aged' or treated parquet, so it can be installed straight away. The parquet can also be supplied unfinished. The floor must then be sanded on site and treated with a protective finishing layer to complete the floor. Q2 parquet satisfies high quality requirements. The selection of the type of wood, optimum conditions during the production process, and the fact that the product is sold exclusively via professional dealers guarantee a top-class product. From tree to living room, everything has been thought of.

**A SUMMARY OF THE
ADVANTAGES OF Q2 :**

- Minimum height
- Exceptional stability and fit
- Suitable for use with underfloor heating
- Wide variety of wood types
- No hollow sound thanks to fully bonding
- Dutch-made
